w = 0
default
exact-start share of compatible complete calls
MANE exact given assembled
b
Minimum length: accuracy
MANE exact given assembled
minimum protein length (aa)
Minimum length: unannotated
post-hoc filter
−m 50, no rule
−m 50 + rule (default)
−m 100
no GENCODE CDS overlap (fraction)
minimum protein length (aa)
c
Homology evidence: accuracy
Δ MANE exact given assembled (percentage points)
Swiss-Prot
Swiss-Prot + Pfam
Pfam only
−human
−primates
−mammals
−vertebrates
−animals
Pfam only
Swiss-Prot with clade removed
d
Homology evidence: predictions
4,465 short unannotated ORFs kept only by homology to the Alu-encoded C-terminus of chimpanzee UTY
Δ distinct predicted CDSs (thousands)
−human
−primates
−mammals
−vertebrates
−animals
Pfam only
Swiss-Prot with clade removed
